

NASDAQ: LUNG November 2021

Forward Looking Statement

This presentation and certain statements made during this presentation contain forward-looking statements that involve risks and uncertainties. Forward-looking statements are neither historical facts nor assurances of future performance. Instead, they are based on our current expectations and projections about future events and financial trends that we believe may affect our financial condition, results of operations, business strategy, and financial needs. All statements other than statements of historical facts contained in this presentation, including any statements regarding our ability to design, develop, manufacture and market innovative products to treat patients with challenging medical conditions, particularly those with chronic obstructive pulmonary disease (COPD) and emphysema; our expectations regarding the impact of the COVID-19 pandemic on our business; our expected future growth; our expected future growth of our company; the size and growth potential of the markets for our products, and our ability to serve those markets; any projections of financial information, market opportunities, profitability, or financial position; the rate and degree of market acceptance of our products; coverage and reimbursement for procedures performed using our products; our ability to obtain and maintain regulatory approval or clearance of our products on expected timelines; our plans to research, develop and commercialize our products and any other approved or cleared product; our ability to retain and hire our senior management and other highly gualified personnel; the development, regulatory approval, efficacy and commercialization of competing products; our future financial performance and capital requirements; information including the anticipated efficiencies and strategic and financial benefits related to Chartis; and our expectations regarding our ability to obtain and maintain intellectual property protection for our products are forward-looking statements. The words "may," "will," "should," "expect," "plan," "anticipate," "could," "would," "intend," "target," "project," "estimate," "believe," "estimate," "predict," "potential" or "continue" or the negative of these terms or other similar expressions are intended to identify forward-looking statements, although not all forward-looking statements contain these identifying words. Factors that could cause actual results to differ materially from those contemplated in this presentation can be found in the Risk Factors section of Pulmonx's public filings with the Securities and Exchange Commission ("SEC"), including the Quarterly Report on Form 10-Q filed with the SEC on August 10, 2021, available at www.sec.gov. Because forward-looking statements are inherently subject to risks and uncertainties, you should not rely on these forward-looking statements as predictions of future events. All statements other than statements of historical fact are forward-looking statements. Except to the extent required by law, the Company undertakes no obligation to update or review any estimate, projection, or forward-looking statement. Actual results may differ from those set forth in this presentation due to the risks and uncertainties inherent in the Company's business.

Investment Highlights

Large Market

\$12B opportunity for severe emphysema

Precision Treatment

Proprietary patient selection technology & minimally invasive treatment

Consistent Clinical Results

Clinical benefits demonstrated across 4 RCTs 100+ scientific publications

Broadly Reimbursed

In global guidelines & reimbursed in US, Europe and Australia

Global Footprint

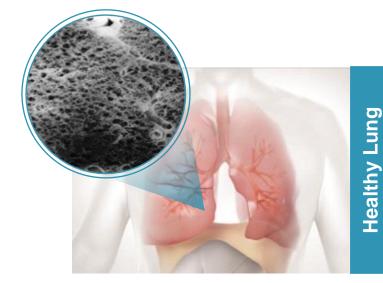

>25,000 patients treated in >25 countries¹

Strong Pipeline & Team

Additional technology to expand market, experience to deliver

COPD and Emphysema: A Prevalent Disease with High Unmet Medical Needs

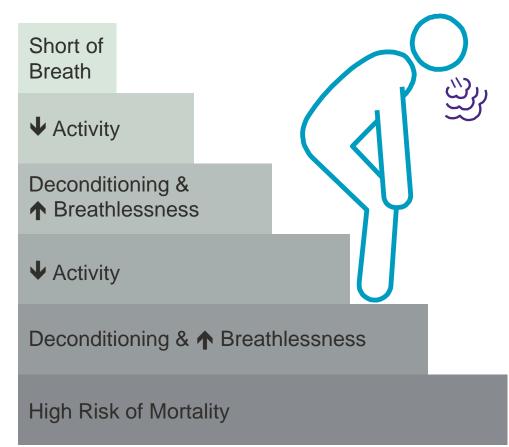

- Emphysema is a form of Chronic Obstructive Pulmonary Disease (COPD) resulting in the progressive destruction of lung tissue
- Accounts for ~25% of all COPD patients¹
- Air-trapping causes increasing lung volume and persistent breathlessness
- COPD is among the leading causes of death worldwide
- ~\$49B in expected direct U.S. medical costs attributable to COPD in 2020²

Lung with Emphysem

Emphysema Disease Progression

Hyperinflation

- Significant breathlessness drives downward spiral¹
- Quality of life generally worse than for patients with lung cancer²
- High mortality risk³

Spectrum of Treatment Options

Medical Management

Non-invasive

Limited effect in severe patients

Pulmonary Rehabilitation

Non-invasive

Difficult to sustain benefits

Zephyr[®] Valves

Designed to Provide Benefits Similar to Surgery with Broader Eligibility

Minimally Invasive

Fully Removable

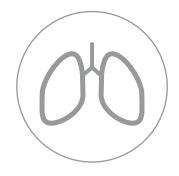

Lung Volume Reduction Surgery

Invasive Effective >5% risk of death

Not an option for most patients

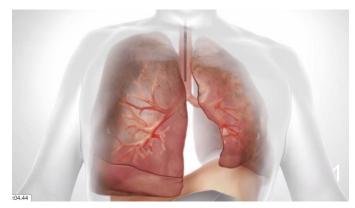

Lung Transplant

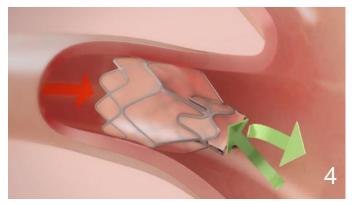

Invasive Effective 5-15% risk of death

Not an option for most patients

How Zephyr[®] Valves Work

Bronchoscope introduced into lungs of patient with diseased, hyperinflated lobe

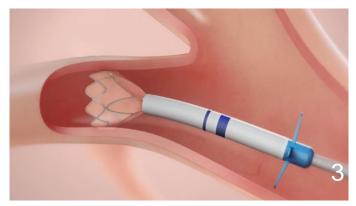

Zephyr[®] Valve allows trapped air to escape but not to re-enter

Delivery catheter advanced into target lobe through bronchoscope

An average of 4 **Zephyr[®] Valves** delivered to fully occlude diseased lobe

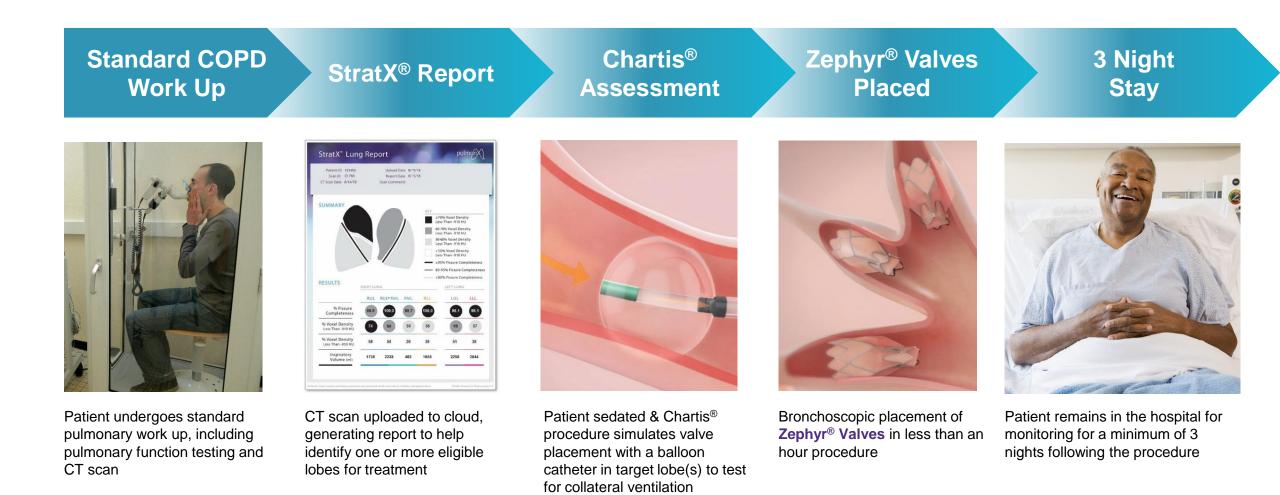

Valve size chosen in one step procedure and delivered to seal target airway

Hyperinflation in target lobe is reduced, improving lung function and breathlessness

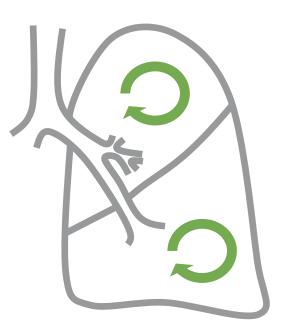

The Zephyr Valve Patient Journey

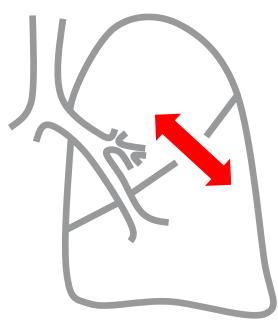

Collateral Ventilation: A Key Exclusion Criteria

No Collateral Ventilation (CV-)

- Complete lobar fissures
- ✓ Normal air passage
- Eligible for procedure

Collateral Ventilation (CV+)

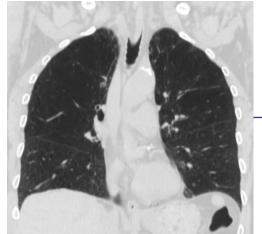

- Incomplete lobar fissures
- Bypassing of normal airways
- ~50% of severe emphysema patients

Patient Screening is Critical for Optimal Patient Selection

StratX[®] Analysis Helps Determine Eligible Lobes

CT Scan

- **Cloud Upload** StratX[®] Lung Report Scan ID ID-78 TIMMAS RESULTS Cloud-based quantitative analysis of CT Scan
- First line evaluation for:
 - Volume
 - Tissue Destruction
 - Fissure completeness an indicator for collateral ventilation
- Identifies potential lobe(s) for Chartis[®] Evaluation and Zephyr[®] Valve treatment

StratX Report

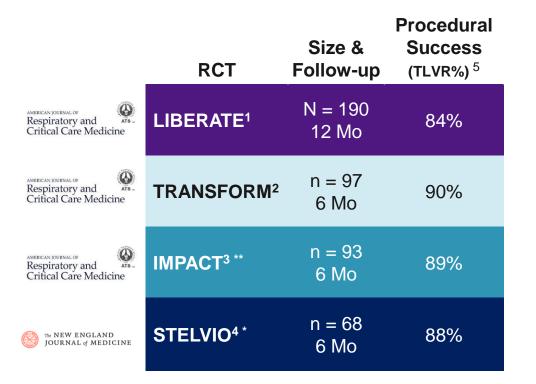

Chartis® System: Proprietary CV Testing for Patient Eligibility

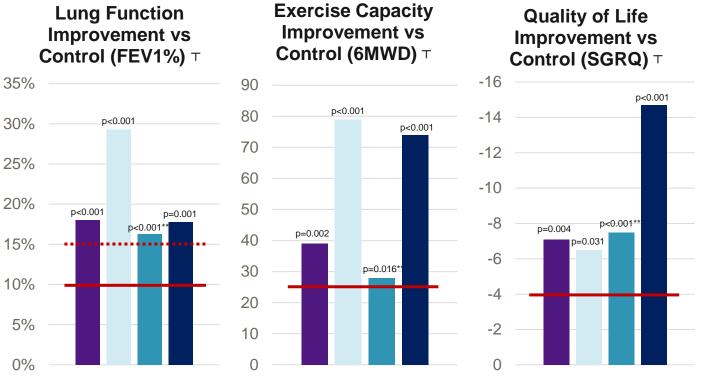

Physiological Measure of Collateral Ventilation

- Evaluates the presence or absence of collateral ventilation
- Measures changes in pressure and airflow
- Unique, patent protected technology

Consistent Outcomes Across Four Randomized Trials

..... Minimal Clinically Important Difference

100+ scientific articles published on the clinical benefits of Zephyr Valves

⁵ Total Lung Volume Reduction of > 350mL

*SGRQ Per protocol, all other values listed are ITT ** Data included in FDA-approved instructions for use T Difference between valve and control groups

Data Suggesting Long-Term Benefits

Retrospective Analysis of Long-Term Survival Following Successful Lung Volume Reduction (Atelectasis) ^{1,2}

At 5 years following valve treatment, patients with atelectasis were ~45% more likely to survive than patients without (n=449)

Established Global Footprint

Zephyr[®] Valves Available in >25 Countries¹

- Predominantly direct sales model with > 90% of sales direct¹
- 88 global sales territories¹
 - \circ 54 in US
 - o 34 OUS
- Significant market expansion opportunities

Efficient U.S. Commercial Strategy

Comprehensive Market Development Strategy

1. Increase centers of excellence capability & capacity Google 3. Increase volume and reduce cost of patient self referrals

2. Increase referral network activity

U.S. Reimbursement in Place

Coding

- Category I CPT[®] codes physician billing
- ICD-10 procedure codes for hospital payment

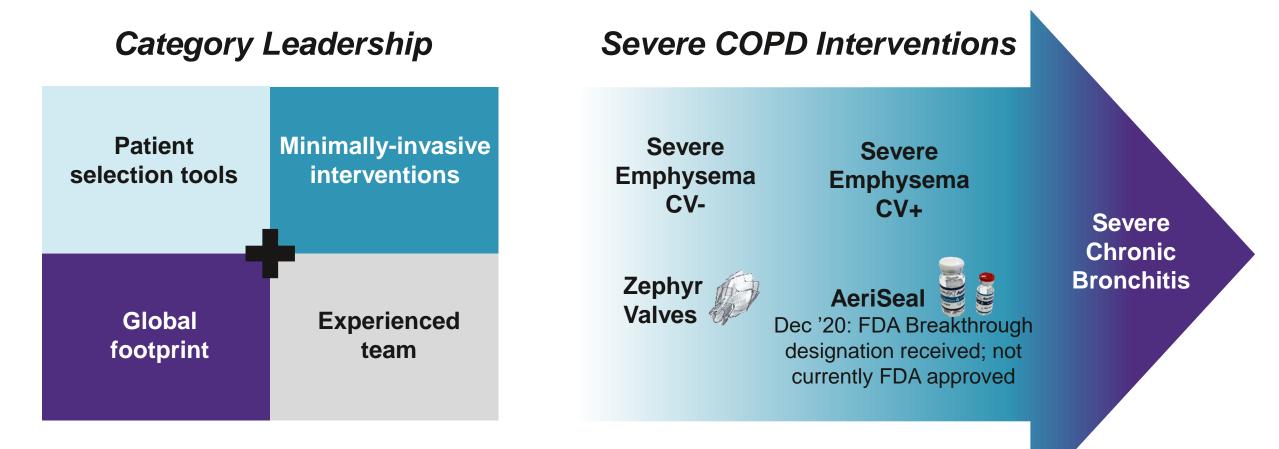

Coverage / Payer Mix

- ~50% Traditional Medicare / Medicaid
- ~25% Managed Medicare / Medicaid
- ~25% Commercial
 - Expanding Commercial coverage
 - Preauthorization approvals from major payors (>95%)

Payment

- Established physician payment
- Appropriate hospital payments
 - MS-DRGs 163, 164, 165 (Major Chest Procedures) pay facilities \$12K-32K¹
 - APC 5155 for Chartis[®] procedure when valves not placed, pays facilities >\$5K²

Vision: Build a Leading Interventional COPD Company

Financial Summary

Revenue

- \$13.3 million in 3Q21
 - US: \$6.9 million
 - OUS: \$6.4 million

Gross Margins

• 73.4% in 3Q21

Cash Position

• \$202.6 million in cash, cash equivalents, and marketable securities as of 9/30/2021

Sales in \$ Millions

Thank you
